

Sundaya Solar Frame Mounting Kit

for Kyocera 40 & 50w modules

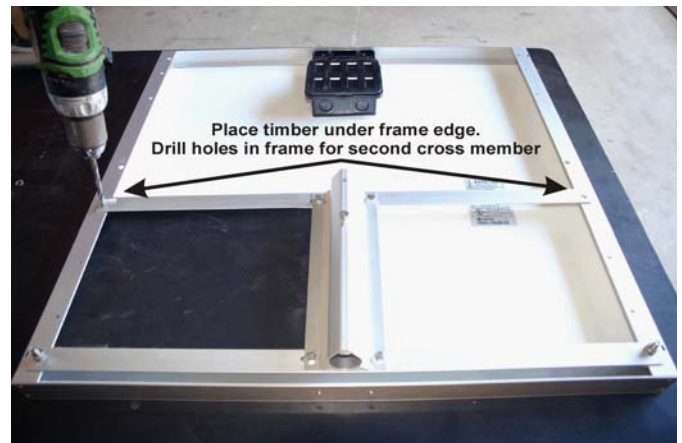

1. Place solar module face down on a flat surface. Be careful not to scratch the tedlar (white plastic) protective layer on the back of the solar panel.

2. Bolt on one cross member using existing mounting holes on the solar panel such that the pole will end up roughly under the centre of the solar module.

3. Use the pole mounting bracket and second cross member to find the position for drilling bolt holes for second cross member.

4. Place timber under drilling locations to prevent damage to tedlar coating on solar module. For narrower modules, shorten and redrill the cross members to suit.

5. Fasten all bolts on the solar module. Slide pole of the frame into the pole mounting bracket and fasten bolt securing the pole in the bracket.
